Immin. 62:1631-1638(1994).
-!- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
-!- SUBCUIT: Heterodimer of an alpha subunit and a beta subunit.
-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SIMILARITY: In the N-terminal section; belongs to the urease gamma subunit family.
-!- SIMILARITY: In the C-terminal section; belongs to the urease beta subunit family.
-!- CAUTION: In Helicobacter the alpha subunit is what is known, in other bacteria as the beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Solnick J.V., O'Rourke J., Lee A., Tompkins L.S.; "Molecular analysis of urease genes from a newly identified uncultured species of Helicobacter.";

-!-SUBCELULAR LOCATION: Cytoplasm (By similarity).
-!-SUBCELULARITY: In the N-terminal section; belongs to the urease gamma subunit family.
-!-SIMILARITY: In the C-terminal section; belongs to the urease beta subunit family.
-!-CAUTION: In Helicobacter the alpha subunit is what is known, in other bacteria as the beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                          61 CMHFLKKDEVMPGVGNMVPDLGVEATFPDGTKLVTVNWPIEP-DEHFKAGEV--KFGCDK

07-MAR-2006, entry version 37.
Urease alpha subunit (EC 3.5.1.5) (Urea amidohydrolase alpha subunit)
Name-ureA; Synonyms-hpuA; OrderedLocusNames-JHP0068;
Helicobacter pylori J99 (Campylobacter pylori J99).
Bacteria; Proteobacteria; Epsilonproteobacteria; Campylobacterales;
Helicobacteraceae; Helicobacter.

Biol. 8:505-509(2001).

-!- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).

-!- SUBUNIT: Heterohexamer of 3 alpha and 3 beta subunits. Four heterohexamers assemble to form a 16 nm spherical complex.

-!- SUBCELLALAR LOCATION: Cytoplasm.

-!- MISCELLANEOUS: Oligomerization may protect the enzyme against denaturation in an acidic environment.

-!- SIMILARITY: In the N-terminal section; belongs to the urease gamma subunit family.

-!- SIMILARITY: In the C-terminal section; belongs to the urease beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         subunit family.
-!- CAUTION: In Helicobacter the alpha subunit is what is known, in other bacteria as the beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 X-RAY CRYSTALLOGRAPHY (3.0 ANGSTROMS), AND SUBUNIT STRUCTURE. Novel Helicobacter felis urease X and Y subunit polypeptides, useful in the diagnosis of Helicobacter felis infections and in the preparation of vaccines.

Claim 10; SEQ ID NO 3; 76pp; English.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease Y subunit polypeptide of the invention.

                                                                                                                                                          The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the inventors.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360

The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.

```
Novel isolated nucleic acid molecule having urease gene cluster, and conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii.
```

Claim 24; SEQ ID NO 5; 40pp; English

Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease structural gene and at least one urease accessory gene. The nucleic acid molecule is chosen from urea, ureb, ureb, ured, ureh and urel. The nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated by Edizozeronii comprising a nucleic acid and a carrier, and an isolated on nucleic acid, proteins and antibodies are useful for vaccinating mammals against onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleoic acid as an antigen, providing an antibody. Or providing a nucleotide sequence as a probe in a nucleic acid hybridisation assay, contacting the sample with the antigen or the probe, and detecting any reaction which indicates that H. bizzozeronii ureB prosent in the sample. This sequence represents the H. bizzozeronii ureB invention relates to an isolated nucleic acid molecule conferring

Vectors, e.g. pQRV314 (see also AAT44351), carrying the gene locus can be used to transform host cells for the large-scale prodn. of recombinant, enzymatically inactive, multimeric urease. The urease complex induces a mucosal immune response that can treat or prevent Helicobacter, esp. H. pylori, gastroduodenal infection. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                  421
                                                                                                                                                                                                      This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastrits, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also bused for the production of antibodies. The products can also be used for detection and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antisense; prokaryotic essential gene; cell proliferation; drug design.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a proince operably linked to the nucleic acid nucleic acid; (2) a host cell containing the vector; (3) an isolated of encoding a polypeptide whose expression is inhibited by the antisense contined acid; (4) an antibody capable of specifically binding captisense nucleic acid; (4) an antibody capable of specifically binding captisense nucleic acid; (4) an antibody capable of specifically binding captisense nucleic acid; (4) an antibody capable of specifically binding contined proliferation or the activity of agene in an operon required for proliferation or the activity of agene in an operon required for captised fo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            122 GEGMIITAGGIDSHTHFLSPQQPPTALANGVTTMFGGGTGPVDGTNATTITPGKWNLHRM 181

Pylori and which suppresses proliferation of H. Pylori and which suppresses urease activity of H. Pylori by an immune reaction. Also included are a gene which encodes the urease fragment, a vaccine against H. Pylori comprising the urease fragment, a transformed cell transformed by introducing the gene, an antibody which recognises the urease fragment and transforming a plant by introducing the gene into the plant and making it express. The urease fragment is useful for producing blood serum containing antibodies which suppresses proliferation of H. Pylori and which suppresses urease activity of H. Pylori which involves immunising a living organism (e.g. a human, cow or hen) with the urease immunising a living organism (e.g. a human, cow or hen) with the urease is transgenic animals expressing the fragment. H. Pylori is thought to be a cause of gastric and peptic ulcers, gastritis and may be implicated in stomach cancer. The urease enzyme is thought to be responsible for maintaining the bacterium in the acid conditions of the stomach. The present sequence is the H. Pylori urease beta subunit from which the

a Helicobacter antigen, and parenterally administering to the mammal a comprising anticle action molecule another antigen. Also included is an attenuated Salmonella vector comprising a mucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease, a urease subunit, or its immunogenic fragment (encoded by the ureA and ureB genes). The mammal is at risk of thaving but does not have Helicobacter infection or has a Helicobacter in a mammal. The vector further comprises an hirA or infection. The attenuated Salmonella vector further comprises an hirA or infection. The vector and be used to treat Helicobacter infection. The vector and the method can be used to treat Helicobacter infection. The vector and the method can be used to treat Helicobacter induced gastroducdenal diseases, including acute, chronic or atrophic gastritis, peptic ulcer diseases (e.g. gastric or ducdenal culcers), and gastric carcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing UreA and UreB and including an B. coli AmpR gene. The present sequence represents a protein or peptide encoded by the pHUR3
                                                                                422

The composition may include the UreA protein (AAR74336, a ureaseassociated heat shock protein (AAR74338-39) or the UreI protein (AAR74340). The composition is used to prepare a vaccine for humans or animals, especially against H. pylori and H. felis. Antibodies against the proteins may be used for treating Helicobacter infection, and primars/probes to the DNA sequence may be used for detection of Helicobacter infection. (Updated on 25-MAR-2003 to correct PN field.)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       118,

Patent No. 6585975

GENERAL INFORMATION:
APPLICANT: Kleanthous, Harold
APPLICANT: Londono-Arcila, Patricia
APPLICANT: Freeman, Donna
TITLE OF INVENTION: Use of salmonella vectors for
TITLE OF INVENTION: Vaccination against helicobacter infection
FILE REFERENCE: 06132/06001
CURRENT FILING DATE: 1999-11-01
CURRENT FILING DATE: 1999-11-01
NUMBER OF SEQ ID NOS: 52

COFTWARE: FastSEQ for Windows Version 4.0
